# AI PRODUCTIVITY TOOLS

STERLING SCRIBED AI

Empowers you to turn ideas into polished, professional presentations in minutes. With intelligent AI-driven tools, it streamlines collaboration, enhances productivity, and ensures your content always makes an impact. Experience a smarter, faster, and more creative way to present your vision to the world.

STERLING COOPER, INC.
MERCHANT BANKING·CONSULTING

Sterling Scribed AI is an AI-native productivity and collaboration platform built to replace the fragmented stack of business tools most modern teams rely on. Instead of switching between separate apps for meetings, CRM, messaging, task management, and scheduling, it unifies these essential functions into one intelligent, connected workspace. The platform is designed to centralize company knowledge, streamline workflows, and reduce software costs while ensuring that data flows seamlessly between conversations, contacts, projects, and files. By eliminating tool sprawl, it enables teams to operate with greater clarity and efficiency.

At the core of it is its advanced AI-powered meeting intelligence system. The platform integrates with popular meeting tools such as Zoom, Google Meet, and Microsoft Teams, automatically joining scheduled calls through AI bots that generate real-time transcripts with speaker identification. Beyond simple transcription, it produces structured summaries, extracts key insights, and highlights actionable next steps. These meeting records are not stored in isolation; they are directly linked to relevant contacts, CRM deals, and project boards. This ensures that every important discussion becomes searchable, contextualized knowledge that can be accessed and leveraged at any time.
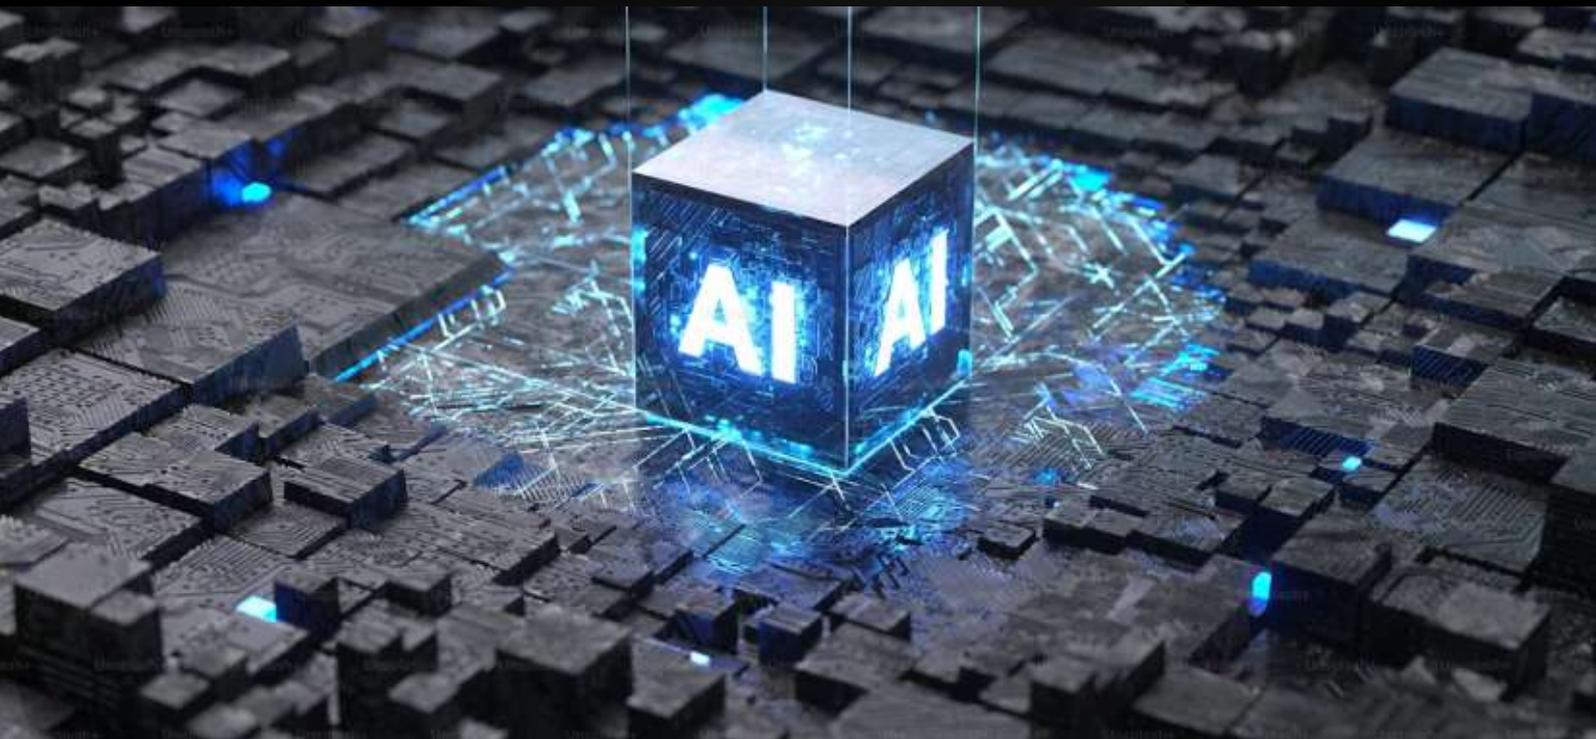

In addition to meeting intelligence, it delivers a fully integrated suite of business tools, including CRM pipelines, team messaging channels, task and project management boards, booking and scheduling pages, file storage, and even call recording through a built-in power dialer. What differentiates the platform is its context-aware AI assistant, which uses advanced retrieval systems to analyze transcripts, notes, contacts, and files across the entire workspace. Users can ask natural language questions about past meetings, sales opportunities, or project updates and receive precise, data-grounded answers instantly. By embedding AI deeply into every layer of workflow management, it positions itself not just as a tool, but as an intelligent operating system for modern teams.

POWERFUL CRM

It delivers a fully integrated CRM and Project Management system built for modern teams that want everything connected in one intelligent workspace. Instead of managing sales in one tool and projects in another, the platform centralizes contacts, deals, tasks, collaboration — ensuring that customer conversations seamlessly translate into execution.

1: CRM CAPABILITIES

The CRM allows businesses to manage unlimited contacts with complete interaction history, including calls, meetings, and notes. Visual drag-and-drop pipelines help track deals through customizable stages, giving clear visibility into sales progress. Built-in analytics provide insights into pipeline value, conversion rates, revenue forecasting, and overall sales performance. Meeting transcripts and communications automatically link to contact profiles and deals, keeping every relationship organized and searchable.

2: PROJECT MANAGEMENT TOOLS

It includes visual kanban boards to manage tasks from planning to completion. Teams can assign tasks, set deadlines, define priorities, and track progress in real time. Milestones and activity logs ensure transparency and accountability across projects. An integrated AI assistant helps draft tasks, summarize discussions, and suggest next steps — reducing manual work and improving productivity.

3: UNIFIED WORKFLOW ADVANTAGE

What sets it apart is the deep integration between CRM and project management. Sales conversations connect directly to tasks and project workflows, allowing teams to move from closing a deal to delivering results without switching platforms. It acts as a centralized business command center — combining relationship management, execution tracking, and AI intelligence in one streamlined system.

TEAM WORKSPACES

Its Team Workspaces provide a centralized platform for team communication, collaboration, and knowledge management. By integrating messaging, file sharing, task creation, and AI-powered search into one unified workspace, teams can stay aligned and productive without switching between multiple apps. Workspaces can be organized for departments, projects, or company-wide initiatives, ensuring conversations, files, and insights remain structured and accessible.

1: UNIFIED COMMUNICATION

Each workspace offers Slack-style messaging with channels, direct messages, and threaded conversations. Teams can discuss topics in dedicated channels, collaborate privately in direct messages, or reply in threads to maintain context. Important updates can be pinned for quick reference, and role-based permissions allow workspace owners to manage access and maintain order. Real-time synchronization across desktop, mobile, and web ensures all team members stay connected no matter where they work.

2: FILE SHARING & SEARCHABLE KNOWLEDGE

Workspaces include a shared file drive where users can upload documents, meeting transcripts, and other resources. Every file, conversation, and transcript is indexed and searchable with AI-powered tools, making it easy to retrieve past discussions or key insights instantly. This central repository turns each workspace into a growing knowledge base, keeping information organized and accessible for the whole team.

3: TASK CREATION & ACTION MANAGEMENT

Team Workspaces allow conversations to be turned directly into tasks. Users can assign responsibilities, set deadlines, and track progress without leaving the workspace. Bulletins and announcements can be posted to broadcast important updates, project milestones, or company news. By combining communication, files, and task management in one platform, it ensures teams have full context and can act on information quickly.

PROJECT MANAGEMENT

It includes a robust project management system designed to help teams plan, track, and execute work without needing a separate project tool. Built directly into the platform alongside CRM, messaging, and AI features, the project management capabilities allow teams to turn ideas and action items into structured tasks and workflows.

Users can organize work using visual boards, assign responsibilities, set priorities, and track progress — all within the same workspace where conversations and customer interactions happen.

1: VISUAL WORK BACKLOGS

The platform offers kanban-style project boards that let teams organize tasks from "backlog" to "done." These boards provide a clear visual overview of project status at any moment, helping teams prioritize work and stay aligned on deadlines and deliverables. Tasks can be moved across stages smoothly, giving managers and contributors an intuitive way to monitor progress without switching between tools.

2: TASK ASSIGNMENTS & TRACKING

Within each project, tasks can be created directly from action items or conversations. Teams can assign tasks to specific members, add due dates, set priority levels from low to urgent, and include detailed descriptions or comments. Time estimates and actual time tracking features help teams better estimate workloads and evaluate performance over time, ensuring work stays on schedule and bottlenecks are visible.

3: ACTIVITY HISTORY & COLLABORATION

Every task includes a built-in activity log that records comments, changes, and updates, giving teams full transparency into who did what and when. This history helps with accountability and context, especially for complex projects involving multiple contributors or departments. Collaboration is further enhanced by integration with team workspaces — allowing discussions, files, and project details to be directly connected and accessible alongside project boards.

4: AI-ASSISTED WORKFLOW INTEGRATION

What makes its project management powerful is its integration with the wider platform's AI capabilities. Action items extracted from meeting transcripts can be turned into tasks automatically, meeting summaries feed into project context, and AI search helps teams locate relevant project conversations or files quickly. This reduces manual work and ensures that project planning and execution remain informed by communications, insights, and external data across the organization.

AI TRANSCRIPTION & MEETING CAPTURE

Its AI Transcription turns every meeting into a detailed, searchable record without manual note-taking. By integrating with popular meeting platforms like Zoom, Google Meet, and Microsoft Teams, the system automatically captures and transcribes conversations as they happen. This allows teams to focus on the discussion while the AI handles recording and documentation.

1: AUTOMATED MEETING CAPTURE

AI bots can automatically join scheduled meetings, eliminating the need for manual start/stop recording. As the conversation unfolds, real-time transcription generates accurate written text and clearly distinguishes between different speakers. This transforms spoken dialogue into easily readable transcripts that everyone can review later.

2: SMART SUMMARIES & ACTION ITEMS

Beyond basic transcription, it extracts key insights, summaries, action items, and decisions from every meeting. These distilled highlights help teams quickly understand the most important outcomes without reading full transcripts, making follow-ups and next steps clearer and faster to execute.

3: SEARCHABLE KNOWLEDGE LIBRARY

All transcripts are stored in a centralized, searchable repository that lets users instantly find past discussions, specific quotes, or decisions. The system supports multiple languages, making it useful for global teams and international conversations. Transcripts and summaries can also be exported in formats like PDF, DOCX, or TXT for sharing or archiving.

BOOKING & SCHEDULING

It includes a Booking & Scheduling system that helps teams coordinate meetings, appointments, and calls without the back-and-forth of email. Users can create customized booking pages and share them with clients or colleagues so others can choose a time that fits everyone's calendar. This simplifies scheduling, reduces friction, and improves professionalism in client interactions.

1: CUSTOM BOOKING PAGES

Users can build personal or team booking pages with selectable time slots, availability rules, and buffer times between meetings. These pages reflect real calendar availability and prevent double-booking, making it easy for external contacts to schedule appointments without confusion.

2: CALENDAR SYNC & AUTOMATION

The scheduling system syncs seamlessly with native calendars, ensuring all confirmed meetings are automatically added to the correct calendar. Users can set rules for working hours, meeting durations, and time zone adjustments so that scheduling remains smooth across teams and global clients. Automatic reminders and confirmations help reduce no-shows and keep everyone prepared.

3: FLEXIBLE MEETING OPTION

Its booking tool supports a variety of meeting types — from one-on-one consultations to group sessions and team availability. Users can set different meeting categories, define custom durations, and tailor booking experiences to specific use cases. This flexibility makes scheduling simple for both internal teams and external stakeholders.

INTEGRATIONS & API

It connects with the tools your team already uses, making it easy to bring data and workflows together in one intelligent workspace. Integrations allow you to sync calendars, communication apps, project tools, and developer platforms so that it can automatically pull in relevant information and help you work more efficiently without manual data entry. These connections help ensure meeting details, tasks, and contact information flow seamlessly between systems.

1: CALENDAR & MEETING TOOLS

It integrates with popular calendar and meeting services so you can schedule, join, and capture conversations without extra setup. Once connected, the system automatically detects events and uses AI bots to join and transcribe meetings — keeping all interaction history and insights organized within the platform.

2: COLLABORATION & PRODUCTIVITY TOOLS

The platform offers connections to common team and project tools so communication and work items stay in sync. This includes integrations with workplace chat platforms and task tracking systems, allowing messages, files, and action items to flow into its workspaces and boards. These integrations ensure collaboration history and project context are all accessible in one place.

3: DEVELOPMENT & EXTERNAL TOOLS

It supports connections with developer tools and third-party systems to extend its capabilities further. Developers can use APIs and extensions to build custom workflows, pull data from external sources, or push insights back into other tools your team uses daily. This flexibility lets organizations tailor the platform to fit their specific tech stack and business processes.

POWER DIALER

It includes a Power Dialer feature designed to help sales and outreach teams make more calls in less time with less manual effort. Instead of manually dialing every number from a list, the Power Dialer automates the process so that calls are placed quickly one after another. This allows teams to stay focused on live conversations while the system handles dialing and call flow, significantly boosting outbound calling productivity.

1: AUTOMATED CALLING WORKFLOW

With the Power Dialer, users can initiate calls directly from their contact lists or CRM records. The system automatically proceeds to the next call in the queue, eliminating the downtime typically caused by manual dialing. This streamlined workflow helps sales reps make more connections per hour and reduces the repetitive tasks that slow down high-volume outreach efforts.

2: CALL RECORDING & INTERACTION TRACKING

The feature includes the ability to record calls and track outcomes, ensuring that every conversation is logged and accessible later. Teams can review call recordings for quality control, training, or compliance purposes, and the results of each call (such as connected, voicemail, or no answer) are captured in the system for better pipeline visibility and follow-up planning.

3: INTEGRATED WITH CRM & ANALYTICS

Because the Power Dialer is built into its broader CRM ecosystem, call data, contact interactions, and notes automatically tie back to the relevant customer records. This means sales teams have a unified view of every interaction across calls, meetings, and emails — helping them make data-driven decisions and prioritize outreach effectively.
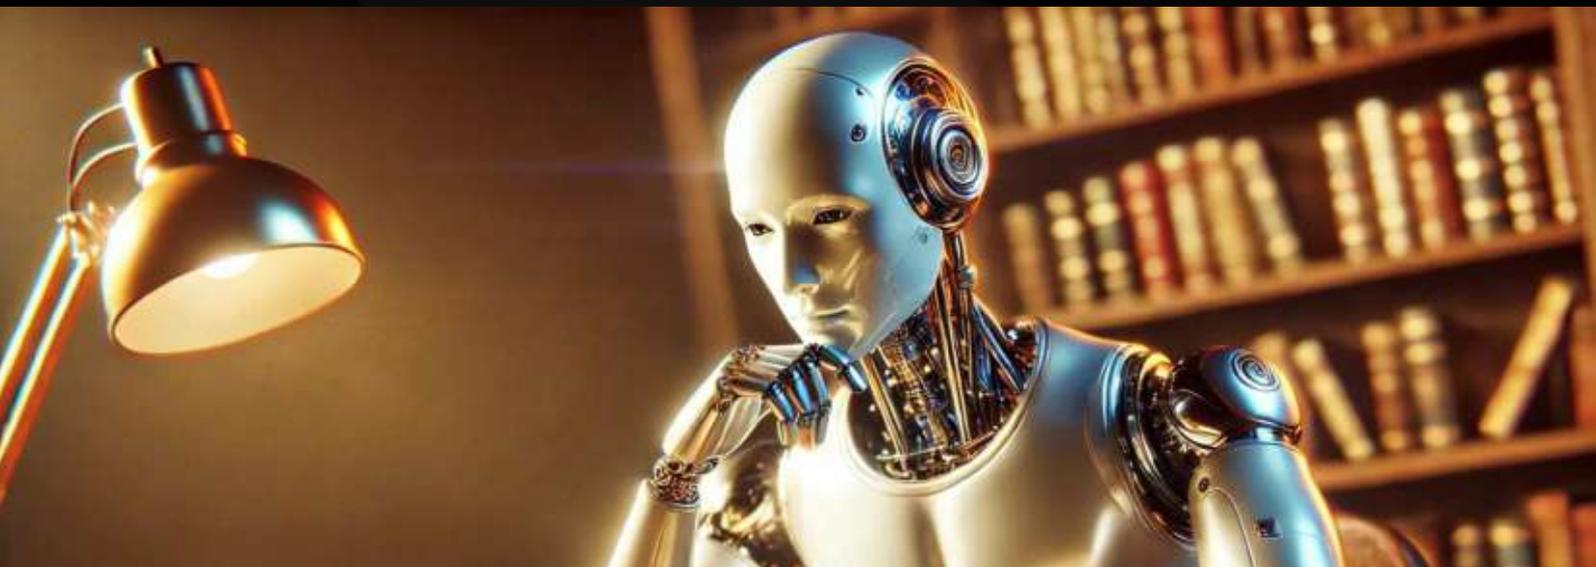

AI ASSISTANT & EMAIL

Its AI Assistant is an intelligent digital co-pilot that helps users quickly find answers, generate content, and take action across the entire workspace. Rather than manually searching through documents, transcripts, chat threads, or project boards, users can simply ask the AI Assistant in natural language and receive contextually relevant responses, summaries, or recommendations. This capability turns it into more than just a platform — it becomes a proactive partner that helps teams stay efficient and informed.

1: CONTEXT-AWARE ASSISTANCE

The AI Assistant uses information from meetings, contacts, CRM records, messages, tasks, and files to provide answers that are meaningful and grounded in the organization's actual data. Whether you want a summary of past discussions, insights on a deal, or a recap of project status, the assistant draws from connected sources so that responses reflect real context instead of generic knowledge.

2: CONTENT GENERATION & SUGGESTIONS

Users can rely on the AI Assistant to generate written content such as follow-up emails, meeting summaries, task descriptions, or briefing notes. It can also suggest next steps based on available data — for example, identifying action items from a transcript or recommending tasks to assign after a meeting. This helps teams reduce repetitive work and move faster from conversation to execution.

3: NATURAL LANGUAGE INTERACTION

Interaction with the AI Assistant feels conversational and intuitive. Users can ask questions in plain language and receive clear, concise outputs that can be used immediately. This makes it accessible even to team members who may not be familiar with advanced search tools or complex filtering, democratizing access to organizational knowledge.

DRIVE & FILE MANAGEMENT

Its File Drive is a centralized hub for storing, organizing, and managing all your documents, recordings, and files in one secure platform. Instead of juggling multiple cloud storage tools, teams can keep everything — from meeting transcripts and project files to contracts, presentations, and spreadsheets — in a single location. By linking files directly to relevant projects, contacts, tasks, or conversations, the File Drive ensures that essential information is always easily accessible and contextually connected.

1: ORGANIZED STORAGE & EASY ACCESS

The File Drive allows users to create structured folders and categories tailored to their workflow, making it simple to manage large volumes of documents. Whether you're storing client agreements, internal reports, or collaborative project assets, the intuitive organizational system ensures that files are easy to locate and maintain. Teams can quickly browse, filter, and access content without wasting time hunting through multiple storage solutions.

2: SEARCHABLE REPOSITORY WITH AI

All files within the drive are fully indexed and searchable, enabling users to find documents not just by file name, but by content, keywords, or associated projects. The AI-powered search makes it effortless to retrieve relevant materials, past meeting transcripts, or reference documents across the entire workspace, helping teams save time and maintain continuity across projects.

3: COLLABORATION & CONTEXTUAL SHARING

The File Drive is fully integrated with its other features, allowing files to be shared directly with teammates, linked to tasks, projects, or chat channels. This ensures that collaboration occurs in context, that everyone works with the latest version of a document, and that discussions around content remain centralized. By keeping all files connected and easily accessible, teams can work more efficiently, reduce version conflicts, and maintain a single source of truth for all organizational documents.

ENTERPRISE PILOT PROGRAM

Its Enterprise Pilot Program lets innovation-minded organizations test the platform in a controlled setting before committing to a full deployment. The pilot is designed to give enterprises real insight into how it can impact productivity, collaboration, and operational workflows with minimal risk and cost.

Its an opportunity to evaluate key features — including CRM, AI transcription, team workspaces, project management, booking & scheduling, and AI-assisted automation — with a small group of users before scaling across the whole organization.

1: PILOT STRUCTURE & DURATION

The program typically runs for 30 to 90 days, offering enough time to experience measurable impact while keeping the rollout manageable. During this period, participating teams use it with full support to see how it integrates into daily workflows, supports collaboration, and drives efficiency. Organizations select a pilot team of users and define key performance indicators (KPIs) to track — such as time saved on meeting documentation, improvements in task completion rates, and overall user adoption.

2: LOW-RISK TESTING & RESULTS TRACKING

One of the core advantages of the Enterprise Pilot Program is the low-risk nature of the engagement. The pilot is offered either free or at a significantly discounted rate for qualified organizations, and there's no obligation to purchase a full license if it doesn't meet expectations. Participants receive KPI reports that measure usage, efficiency gains, and return on investment so they can objectively evaluate impact before making a larger commitment.

3: EARLY ACCESS & INFLUENCE

Organizations in the pilot gain early access to enterprise-grade features and enhancements before general release, allowing them to be at the forefront of innovation. Participants also have the opportunity to provide direct feedback that helps shape the product roadmap, ensuring it to evolve in a way that meets enterprise needs. This collaborative approach gives pilot customers a chance to influence future feature development while testing real use cases.

4: SEAMLESS MIGRATION SUPPORT

If the pilot proves successful and the organization decides to adopt it widely, dedicated support is provided to handle data migration and onboarding for a smooth enterprise rollout. Customers receive help integrating existing systems, bringing over data, and training teams so that full deployment is seamless and well-supported.

SALES & CRM

Its Sales CRM is a comprehensive platform designed to help sales teams manage leads, track deals, and close more business efficiently. By combining a robust CRM system with integrated calling, AI-powered transcription, automated follow-ups, and analytics, it ensures every customer interaction is captured, organized, and actionable. The platform centralizes customer data, communication history, and pipeline information so teams can focus on revenue growth rather than juggling multiple tools.

1: VISUAL PIPELINES & CONTACT MANAGEMENT

Sales teams can manage deals through drag-and-drop visual pipelines that clearly show each stage, from initial lead to closed sale. Contacts are fully organized with complete interaction histories, customizable fields, and tagging options, making it easy to access essential information at any time. The visual layout and structured data help reps prioritize tasks, track progress, and manage their pipeline effectively, while managers gain instant visibility into team performance and deal status.

2: INTEGRATED CALLING & AI ASSISTANCE

The built-in Power Dialer allows users to call prospects directly from the CRM, automatically logging call outcomes and recording conversations for future reference. AI assistance enhances productivity by generating follow-up emails, summarizing meetings, and suggesting next steps. Meeting transcripts and action items are automatically linked to relevant contacts and deals, reducing administrative work and ensuring every interaction is connected to the sales process.

3: ANALYTICS & FORECASTING

It provides robust dashboards and reporting tools that track revenue, win rates, pipeline value, lead sources, and more. These insights enable sales leaders to forecast results, identify high-impact opportunities, and make data-driven decisions. By combining CRM data, AI-generated insights, and recorded interactions, the platform offers a complete view of the sales pipeline, helping teams stay organized, accountable, and focused on closing deals.

TEAM COMMUNICATION

Its Team Communication feature delivers robust messaging and collaboration tools built directly into the platform so teams can communicate efficiently without relying on separate chat apps. It offers Slack-quality team messaging with unlimited channels, direct messaging, threaded conversations, and company-wide announcements, all connected to your workspace's CRM, project boards, meeting transcripts, and file drive. With this integrated approach, conversations are more productive and better linked to real work and business data.

1: ORGANIZED MESSAGING & CHANNELS

Users can create unlimited channels for teams, projects, topics, or departments to keep conversations structured and easy to navigate. Private one-on-one and group direct messages with full threading ensure conversations remain organized and contextual. Important messages can be pinned for quick reference, while real-time syncing across devices keeps everyone up-to-date whether they're on desktop, mobile, or web.

2: ACTION-ORIENTED COLLABORATION

Team Communication goes beyond chat by enabling users to turn messages into tasks instantly, helping teams move from discussion to action without switching tools. Users can share files, documents, and meeting transcripts directly within chat channels, keeping all relevant information in context. A visual team map offers a snapshot of organizational structure, roles, and reporting lines, improving clarity and collaboration across departments.

3: UNIFIED WORKSPACE INTEGRATION

Because the communication system is deeply integrated with its CRM, projects, AI transcription, and file drive, teams get richer context during every conversation. When discussing a client or project, users can instantly view related CRM records, past meeting notes, linked tasks, and shared files — all without leaving the chat. This integration turns everyday messaging into a powerful collaboration hub that reinforces alignment and productivity.

CONSULTANTS & FREELANCERS

Its Consultants & Freelancers offering is built to help independent professionals run their client work from one centralized platform. Instead of juggling multiple apps for client management, calls, scheduling, project tracking, and file storage, consultants and freelancers can handle everything — from first contact to final deliverables — inside a single intelligent workspace. This simplifies workflows, saves time, and lets you focus more on delivering value to your clients.

1: COMPLETE CLIENT MANAGEMENT

The platform's Sales CRM lets consultants and freelancers manage all clients in one place. You can track client relationships, deal stages, and complete interaction history — including linked transcripts and meeting notes — so nothing falls through the cracks. Unlimited contacts with customizable fields and tags help you organize client data efficiently, and visual pipelines give instant visibility into your work in progress and revenue opportunities.

2: SCHEDULING, CALLS, & PROJECT EXECUTION

It makes it easy for clients to book time with you using public booking pages that sync with your calendar and display availability. The Power Dialer allows you to call clients directly from the platform, and AI bots can automatically join and transcribe meetings so you never miss important details. Built-in project management boards help you track deliverables, tasks, and deadlines for each client engagement, ensuring work stays organized and on time.

3: AI ASSISTANCE & PRODUCTIVITY TOOLS

Consultants and freelancers benefit from AI features that reduce administrative workload and speed up common tasks. The platform can generate follow-up emails and proposals, summarize meetings, and surface action items to help you respond quickly and professionally. A centralized File Drive stores client documents, recordings, and deliverables, while powerful search tools let you find past work or insights instantly. Together, these features create a unified environment that supports client communication, project execution, and knowledge management without tool sprawl.

SOLUTIONS

FOR TEAMS

It empowers teams of all sizes to work more effectively by centralizing communication, collaboration, customer workflows, and execution in one intelligent workspace. Rather than relying on separate apps for team chat, CRM, project management, meeting capture, and scheduling, organizations can use a single platform that integrates all of these capabilities and ties them together with advanced AI. This unified approach ensures teams stay aligned, reduce administrative overhead, and maintain full visibility into work across departments.

1: INTEGRATED TEAM COLLABORATION

It offers native team chat with channels, direct messaging, and threaded conversations so that internal communication is structured and context-rich. Teams can share files, discuss project updates, and post announcements without switching tools, making collaboration seamless. The platform also links conversations directly to projects, contacts, and tasks so that everything you discuss has a clear connection to execution and outcomes.

2: CROSS-FUNCTIONAL WORKFLOW & VISIBILITY

For teams that span sales, operations, product, or customer success, it brings together CRM, meetings, project boards, and AI-assisted workflows into a cohesive system. Team members can track sales pipelines, manage tasks, assign work, and access shared resources from one place. With AI-generated meeting transcripts, summaries, and action items automatically linked to contacts and projects, teams get a shared source of truth that helps reduce misunderstandings and keep everyone informed.
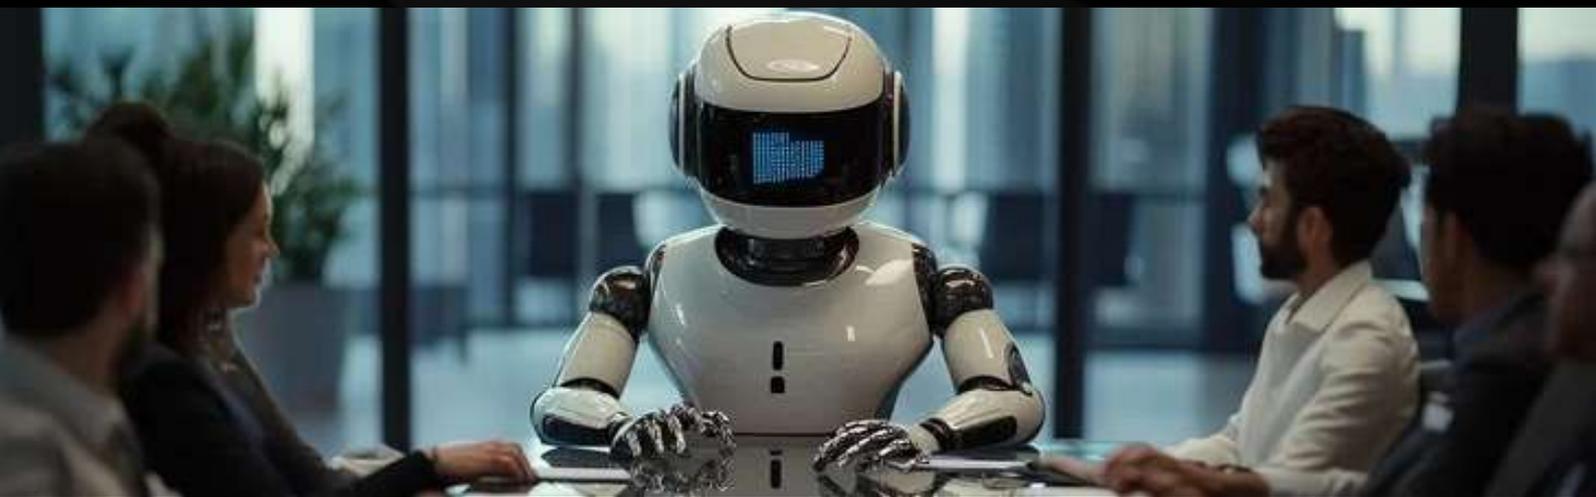

3: AI-POWERED SEARCH & INSIGHTS

A core advantage for teams is its AI Assistant and searchable database of transcripts, files, tasks, and discussions. Team members can ask natural-language questions and get contextually relevant answers drawn from internal records, helping them find insights across projects and customer interactions instantly. This accelerates decision-making and reduces the need for back-and-forth information requests across team members.

SOLUTIONS

REMOTE TEAMS SUPPORT

It is designed with remote teams in mind, offering a unified workspace that brings together communication, collaboration, and workflow tools so distributed teams can stay aligned and productive. Instead of relying on separate apps for messaging, project tracking, file sharing, and meeting notes, remote teams can use it to centralize all work and communications in one connected platform. This ensures that context stays intact regardless of where team members are located or when they log in.

1: INTEGRATED COMMUNICATION ACROSS LOCATIONS

Remote teams benefit from its built-in messaging channels, direct messages, and threaded discussions, which keep conversations structured and accessible. Remote workers can share files, meeting transcripts, and updates in real time, making collaboration seamless even across time zones. Channels and announcements help ensure that everyone — whether in different cities or continents — stays informed and engaged in ongoing projects.

2: MEETING CAPTURE & SHARED KNOWLEDGE

With native AI transcription and meeting capture, remote teams no longer have to rely on scattered notes or email recaps. It automatically records, transcribes, and summarizes meetings, turning spoken information into searchable text with action items and summaries. These records serve as a centralized knowledge base that remote workers can revisit at any time, ensuring clarity and continuity even when team members miss live meetings.

3: CONNECTED WORKFLOW & VISIBILITY

Remote teams also benefit from the platform's native project boards, CRM integration, scheduling tools, and shared file drive. Tasks, contacts, and project files stay linked to related discussions and meeting insights, giving remote teams full visibility into workflow progress. Whether coordinating sales efforts, project deliverables, or client communications, it provides a single source of truth that remote teams can rely on without switching tools.

RESOURCES

1: AI SLIDE GENERATOR

The AI Slide Generator is a free, AI-powered tool that creates professional, presentation-ready slides in minutes without any design skills or sign-up. Users can enter a topic or upload documents, and the AI automatically structures the content into polished slides in executive, professional, or brand-focused styles. With up to 10 free generations per month, no watermarks, and instant downloads, it makes it easy to turn raw content into high-quality presentations quickly and efficiently.

2: AI EMAIL GENERATOR

AI Email Generator is a free, AI-powered tool that helps you create professionally written, ready-to-send emails in under 30 seconds with minimal effort — no signup or account required. Just paste your context (like deal notes or message points), choose the type of email you want (such as cold outreach, follow-up, proposal, introduction, thank-you, or meeting request), and select a tone (e.g., professional, friendly, persuasive, concise, or formal). The AI then crafts a polished, compelling email complete with subject line and clear messaging that you can copy or send directly. You get up to 10 free email generations per month, making it especially useful for sales teams and business communication where speed, personalization, and responsiveness matter.

3: AI AD GENERATOR

AI Ads is a free AI-powered ad creator that instantly generates professional, conversion-ready social media ad creatives without requiring design skills, signup, or account creation. You simply upload product screenshots or brand images (up to 5 files) and optionally add your logo and brand colors, and the AI produces multiple polished ad variations tailored to popular platform dimensions (e.g., Instagram, Facebook, LinkedIn, Twitter, Pinterest) in under two minutes. Each generation includes compelling headlines, body copy, and call-to-action text, and users get 10 free ad generations per month with no watermarks — ideal for product launches, promotional campaigns, A/B testing, and seasonal ads.

4: COLD CALL SCRIPT GENERATOR

The Cold Call Script Generator is a free, AI-powered tool that produces complete, tailored cold call scripts in seconds to help sales teams book meetings and engage prospects without needing creative writing or sales training. Users input basic details like their product/service, target persona, industry, and call objective, and the AI instantly generates a structured script—including openers, qualification questions, pitches, objection handlers, and a close—with up to 10 free script generations per month and no sign-up required. The output is designed to be industry-specific and ready to use, making it ideal for booking meetings, qualifying leads, running demos, or re-engaging cold contacts quickly and confidently.

5: AI MEETING NOTES FROM AUDIO

AI Meeting Notes tool is a free AI-powered assistant that automatically captures and organizes key information from meetings—turning conversations into structured, searchable notes without manual effort. It uses AI to transcribe discussions, summarize key points, highlight decisions and action items, and create polished meeting minutes that are easy to review and share. Designed to save time and improve follow-up accuracy, it focuses on helping users stay productive by letting AI handle note-taking so you can focus on the conversation itself. (General description of typical meeting notes AI functionality)
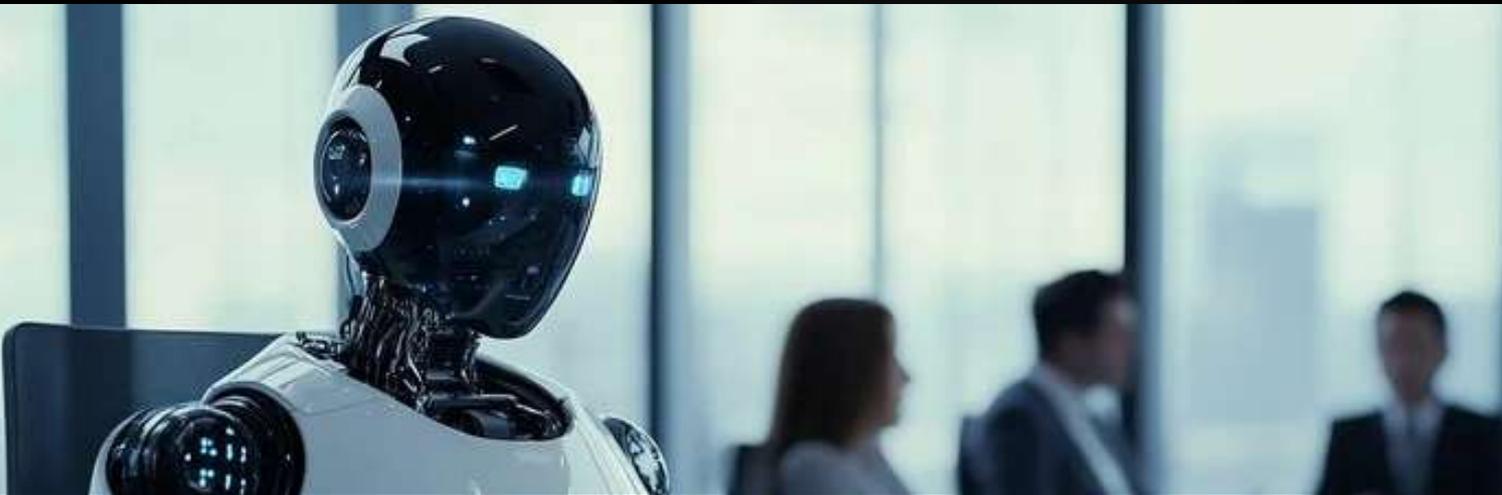

6: STERLING SCRAPER

The Sterling Scraper Chrome Extension is an AI-powered browser add-on that enhances your productivity by bringing its capabilities directly into your Chrome workflow. Once installed, it lets you quickly generate AI-assisted content without leaving your current tab — for example, you can summarize text, generate emails or messages, create notes, or draft creative copy based on the context you're viewing. Designed to save time and reduce manual effort, the extension integrates its writing and content tools into your browser so you can instantly turn web content, documents, or selected text into polished outputs with minimal input. (General description based on typical tools and AI browser extension patterns)

In today's fast-moving work environments, Sterling Scribed AI brings a powerful combination of tools into a single platform so teams can eliminate scattered workflows and wasted time. It integrates AI-powered transcription, meeting summaries, real-time collaboration, CRM, project tracking, and intelligent search across all content, enabling businesses to capture meetings, organize contacts, track deals, and collaborate without constantly switching apps. This unified approach makes data and context instantly accessible, helping teams stay aligned and productive with less manual effort.

Ultimately, it transforms the way teams work by putting intelligence at the center of everyday tasks. Rather than juggling separate apps for meetings, notes, chats, and sales pipelines, users get a seamless experience that captures conversations, surfaces key insights, and connects information across projects — all driven by contextual AI that understands your business workflows. The result is a more efficient, streamlined, and intelligent workspace that lets teams focus on meaningful work instead of administrative overhead.

With it, teams not only save time but also enhance decision-making by turning raw data into actionable insights. Its AI-driven features analyze conversations, highlight critical tasks, and provide context-aware recommendations, ensuring that every team member has the information they need at the right moment. By unifying communication, collaboration, and workflow intelligence, it empowers organizations to work smarter, reduce errors, and achieve goals faster, making it an indispensable tool for modern, high-performing teams.
